Abstract (en)

[origin: WO2015121879A1] The invention refers to a method for obtaining a brush for nails of "fan-like" type starting from a brush of "round" or "flat" type having a plastically deformable handle and whose hairs are partially housed in a seat made in the handle starting from one end thereof. In particular, the seat comprises a cavity delimited by a base and a side wall. The hairs of the brush penetrate the cavity by traversing an opening opposite the base. The method consists of compressing the handle of the brush at a section thereof adjacent to the opening of the seat and arranged at a certain distance from the base. The compression has intensity sufficient to plastically deform the handle and causes a flattening of the hair housing seat due to which the hairs assume a divergent configuration. The brush thus becomes of "fan-like" type.
