Abstract (en)
[origin: WO2015123458A1] A system includes an application programming interface (API), a collection module configured to receive a data subset of a data set, the data subset characterizing usage, by users of a set of client devices of a client entity, of a plurality of software applications hosted on a network, wherein the API is configured to enable the client entity to define the data subset and push the data subset to the collection module, a data-storing module configured to store the collected data, and a processing module configured to determine, based on the stored data, at least one usage rating for each of the plurality of software applications.
