Abstract (en)

[origin: WO2015121410A2] The present invention relates to a toll detection device for detecting a toll for a motor vehicle (1), said device comprising: a position-finding unit (11) which is designed to detect driving data concerning at least one route that has been covered by the motor vehicle (1); an arithmetic unit (12) which is designed to calculate provisional driving data on the basis of the detected driving data; and an interface unit (13) which is designed to transmit the calculated provisional driving data to a data centre (100).
