Abstract (en)

[origin: WO2015121571A1] The invention relates to a control system for equipment (EC) wherein a control unit (UP) which acts remotely in relation to the equipment runs an application (G-API) for the control of the equipment, the equipment not having a data store for the application. The control unit (UP) especially obtains (SER) circuit data (UD) which the equipment (EC) comprises, for controlling operation of the equipment (EC), and addresses (E/S k) the circuit (UD) via a wireless connection (7a; 7b) in order to transmit, to the equipment, control data in accordance with the obtained circuit data and relating to the running of the application by means of the control unit.
