Abstract (en)

Refrigerator and an ice making method thereof are disclosed. The refrigerator, comprises a main body (10) configured to form an appearance of the refrigerator, a storage space installed within the main body, a door (30) configured to open and close the storage space, an ice making chamber (100) provided in the door, a cooling duct (210) configured to allow cooling air to be movable in a longitudinal direction, and provided in the main body to have both ends connected to the ice making chamber such that the cooling air circulates in the ice making chamber, and an evaporation coil (220) installed on the cooling duct and configured to cool air to the cooling air through heat exchange with a refrigerant.
