Abstract (en)
It is presented a method for locating an electronic key for access to a physical space. The method is performed in a locating device and comprises the steps of: receiving a location query from a central server, the location query comprising an identifier of an electronic key; discovering a presence of the electronic key over short range radio; and transmitting a location response to the central server indicating that the electronic key has been located. A corresponding locating device, computer program and computer program product are also presented.
