Abstract (en)
[origin: WO2015124528A1] The invention relates to a door body of a motor vehicle door already known from DE 35 13 054 A1, for which motor vehicle door a terminating strip is arranged on an outer door term at a lower longitudinal edge of the door body. The problem addressed by the invention is that of creating a motor vehicle having at least one side door that can be used for different body variants. This problem is solved in that at least one passage opening is provided on an underside of the lower longitudinal section of the door body, which underside faces the vehicle interior, in which passage opening either a closure component is arranged or an additional trim component is fastened by means of a fastening device.
