Abstract (en)
[origin: WO2015124643A1] A container for consumer articles comprises a box portion comprising a front wall, a rear wall and two side walls extending between the front wall and the rear wall. Further, the container comprises an inner frame positioned within the box portion. The inner frame comprises a receiving portion for at least partly enclosing a group of consumer articles. The receiving portion comprises an inner frame front wall and two lateral walls depending via respective fold lines from the inner frame front wall; and a group of consumer articles positioned within the receiving portion of the inner frame and the box portion. The inner frame further comprises two retaining panels projecting on opposite sides from the receiving portion to cooperate with the front wall of the box portion or the back wall of the box portion such that the receiving portion holding the group of articles occupies a stable positive relative to the front wall of the box portion.
