Abstract (en)

[origin: WO2015124530A1] The invention relates to a closure cover (3) with a tamperproof securing means for an open end (4) of a packaging container (2) having a flange (8) projecting beyond a container wall (7). The closure cover (3) comprises an end wall (9), a skirt (10) and at least one tamperproof lug (12). A supporting surface (25), which defines a supporting plane (26), is formed in an outer circumferential region of the end wall (9), on the side of the latter which is directed towards an open cover end (13). The skirt (10) is formed by a plurality of skirt parts (19, 20, 21), with skirt-part ends delimiting the same. The tamperproof lug (12) has provided on its side which is directed towards the supporting surface (25) at least one latching means (28), which, spaced apart axially from the supporting plane (26), is arranged in the direction of the open cover end (13). A latching surface (29) is formed on the latching means (28), wherein said latching surface is arranged in an overlapping position in relation to the supporting surface (25), as seen in the radial direction.
