Abstract (en)
[origin: WO2015137944A1] A spout fitment (130) for dispensing a scented household liquid (200) is disclosed that includes a pouring spout having a topographical feature (175D) that may increase the exposed surface area of a liquid and/or alter the fluid dynamics of the scented household liquid (200) during a product dispensing event. The pouring spout may comprise a floor surface (144), a first side surface (145), and a second side surface (142) that collectively define a flow channel for dispensing the liquid, the flow channel extending along a longitudinal axis from a spout inlet to a spout outlet (150); and at least one of the floor surface, the first side surface, and the second side surface comprising a topographical feature (175D) selected from at least one of a plurality of depressions and a plurality of protuberances (175D).
