Abstract (en)

[origin: WO2015121491A1] The invention relates to a container for holding foodstuffs, said container comprising a beaker-type main body (1) having an outer wall (10) and a base wall (11), in addition to a first sealing element (2). The outer wall (10) and the base wall (11) delimit a holding chamber having a first opening lying opposite the base wall. According to the invention, the beaker-type main body (1) consists of a composite material comprising at least two layers, one layer being electrically conductive. The electrical conductivity allows other functions to be activated.
