Abstract (en)

[origin: WO2015124282A1] The present invention relates to an illuminating device (34) for a motor vehicle (10), comprising a first headlamp (12) for providing a first light distribution (36) having a first opening range (40), and a second headlamp (14) for providing a second light distribution (38) having a second opening range (42), wherein the first and the second headlamp (12, 14) are designed in such a way that the first opening range (40) and the second opening range (42) completely overlap in a predetermined area, and wherein the first and the second headlamp (12, 14) each have at least one light source for emitting radiation and a deflecting device for deflecting the radiation emitted by the at least one light source.
