Abstract (en)
[origin: WO2015121173A1] The invention relates to a user interface and a method for switching from a first operating mode of a user interface to a 3D gesture mode, in which an operation of the user interface can be conducted using a plurality of gestures, henceforth referred to as 3D gestures, which are carried out freely in space. The method has the following steps: - detecting a hand (4) of a user in a specified region by means of a sensor, - identifying a specified position of the hand (4) of the user and/or a specified movement of the hand (4) of the user, and - switching from the first operating mode to the 3D gesture mode.
