Abstract (en)
A liquid discharging apparatus (1) includes a transport section (10) for a medium (P), a line head (19) in which nozzles discharging liquid in an intersecting direction (B) that intersects a direction of transporting the medium are arrayed, a scan sensor (20) which is moved in the intersecting direction (B) and is capable of detecting an end portion (25) of the medium (P) in the intersecting direction (B), and a controller that controls movement in the intersecting direction (B) of the scan sensor (20), and controls discharging of the liquid based on a detection result of the scan sensor (20).
