Abstract (en)

[origin: EP3109305A1] The present invention provides automatic dishwashing detergent compositions comprising a) one or more N-Acylglucamines of formula (I) or mixtures thereof, wherein R1 is a linear or branched saturated alkyl group comprising from 11 to 21 carbon atoms or a linear or branched unsaturated alkenyl group with one or more double bonds and comprising from 11 to 21 carbon atoms, R2 is hydrogen or a linear or branched saturated alkyl group comprising from 1 to 4 carbon atoms, and b) one or more builder substances, and c) a bleaching system, and d) one or more enzymes. The inventive automatic dishwashing detergent compositions in particular provide a favorable rinse performance, also in phosphate-free compositions, and also lead to an advantageous rinse performance while increasing the renewable carbon index of the automatic dishwashing detergent compositions.
