Abstract (en)
[origin: EP3109376A1] A wire fence comprises a plurality of wires (12, 14) arranged in an intersecting manner to form a multiplicity of apertures, wherein intersecting wires are connected by joints formed by a joining wire portion. In particular, the wire fence comprises lines wires (12) and stay wires (14) connected by hinge joints (16, 20). At least part of the joints (16, 16') are configured in such a way that a free end (18) of the joining wire portion protrudes on one side of the fence, preferably substantially perpendicularly thereto, to form a barb end.
