Abstract (en)
[origin: US2016376843A1] An operating control method of a motorized driving device of a home automation installation comprises at least one step for entering a configuration mode of the device, a step for pairing a control point with an electronic control unit of the device, a step for activating at least one selection element of the control point during a predetermined time period beginning after the pairing step and a step for entering a second standby state of a control order receiving module of the electronic control unit. The second standby state of the control order receiving module has a wake-up frequency of the control order receiving module lower than the wake-up frequency of the control order receiving module in a first standby state.
