Abstract (en)
[origin: EP3109432A1] A device for the performance of a method of cleaning of combustion engines contains a pneumatic-hydraulic, or a hydraulic circuit, which is from one side provided with an adapter for mechanical pressure-tight connection to a combustion space of a combustion engine through its solid casing, and from the other side, it is connected to a source of a chemical-technical liquid, which is forced under the pressure within the range of from 0.1 to 2 MPa into the combustion space of the individual cylinder, in the space above the piston, and in the standstill condition of the engine.
