Abstract (en)

[origin: US2016381624A1] A hub device is configured for communicating with a terminal by using a short-range wireless connection. The hub device is further configured for connecting to a remote service. More particularly, the device is configured for: receiving from the terminal a request to access the remote service, the access request comprising identification parameters for said service; temporarily storing in memory the identification parameters of the request received, in order to send to the remote service a second access request comprising the identification parameters; and upon response from the remote service to the second request, transferring data relating to the service. The identification parameters.
