Abstract (en)

[origin: EP3110059A1] Embodiments of the present invention provide a data transmission and feedback processing method and apparatus. The data transmission and feedback processing apparatus of the present invention includes: a first receiving module, configured to receive a data packet sent by a second device, where the data packet carries a sequence number SN; an identification module, configured to identify an exception by the first device according to scheduling information corresponding to the received data packet and the SN carried in the data packet; and a feedback module, configured to determine the exception by the first device and send a feedback message to the second device, where the feedback message carries an SN, so that the second device retransmits a data packet to the first device according to the SN. The embodiments of the present invention resolve a problem that present uniform HARQ retransmission times cannot meet QoS requirements of different services, so that HARQ retransmission requirements for QoS of different services are met.
