Abstract (en)
[origin: WO2015128720A2] Disclosed is a quick-tying device, preferably for combining objects that are to be tied together, especially for combining hair to form braids, ponytails or the like, comprising a flexible tightening means which can be shaped into a loop, and a stop element which is adjustable along the free ends of the tightening means. The tightening means is shaped into two loops, both of which equally embrace the material to be tied together; and a single stop element has a plurality of openings for threading the tightening means therethrough.
