Abstract (en)
[origin: WO2015128572A2] The invention relates to a device for packaging a material refill (100), particularly a cosmetic material. Said device includes a sheath (202), having an open end (204), and a removable assembly (20) removably attachable to the open end (204) of the sheath (202) between a locked position, in which the refill (100) is retained in the sheath (202), and an unlocked position, in which the refill (100) can be extracted from the sheath (202). According to the invention, the removable assembly (20) includes a retaining interface (50), that engages with the open end (204) of the sheath (202) and has an anchoring member (30), and an actuating member (60) that engages with the retaining interface (50) by being axially movable relative thereto, such as to be moved into an actuating position, in which the actuating member (60) biases the anchoring of the anchoring member (30) to the open end (204) of the sheath (202), and a disengaged position, in which said actuating member releases the anchoring member (30).
