Abstract (en)

[origin: WO2015128508A2] The invention relates to a device (1) for introducing a fluid (2), in particular a gas or a gas mixture, from the device (1) into a fluid (3) surrounding the device (1), in particular into a liquid, comprising a pressure chamber (10), a covering element (11), which forms at least a top side of the pressure chamber (10), a gasifier tub (12), which forms at least a bottom side of the pressure chamber (10), a supply-air media line (30) for feeding the fluid (2) into the pressure chamber (10), a dewatering line (20) for leading liquid out of the pressure chamber (10), and a large number of outlet elements (40) for conducting the fluid (2), which outlet elements are formed in the covering element (11). It is essential to the invention that the covering element (11) can be produced as a molded body or from a monolithic solid body.
