Abstract (en)
[origin: WO2015128332A1] The invention relates to a door-handle system (10) for actuating a movable part (101) of a vehicle (100), in particular a door or hatchback door or the like, having a carrier (11), which can be arranged on an inner side (101.1) of the movable part (101), having a door handle (12), which can be arranged on an outer side (101.2) of the movable part (101) by way of the carrier (11), and the door handle (12), over its longitudinal extent (18), has two ends (12.2), at each of which are provided connection means (12.3) for fastening on the carrier (11), having a fastening element (15), which serves for fastening the door handle (12) on the carrier (11) by way of at least one connection means (12.3), wherein the fastening element (15) has at least one release position (I) and a fixing position (II), and having an adjustment element (16), which serves for adjusting the fastening element (15) between the release position (I) and the fixing position (II). The invention provides for the fastening element (15), in its fixing position (II), to retain the door handle (12) on the carrier (11) by way of both connection means (12.3).
