Abstract (en)  
[origin: WO2015128436A1] Traction member, in particular traction band, traction belt or traction cable, which is elastically deformable transversely to the direction of its longitudinal extent (1) and is optionally deflectable about a deflection roller (2), wherein the following components are provided: a first traction element arrangement (3) comprising two or more first end portions (13) of one or more elongate first traction elements (4), a second traction element arrangement (8) comprising two or more second end portions (14) of one or more elongate second traction elements (9), wherein the first traction element arrangement (3) and the second traction element arrangement (8) are connected together so as to run in parallel alongside one another laterally, that is to say transversely to the direction of longitudinal extent (1), and wherein the first abutment region(s) (7) of the first traction element arrangement (3) is/are arranged in a manner offset in the direction of longitudinal extent (1) with respect to the second abutment region(s) (12) of the second traction element arrangement (8).
