Abstract (en)
[origin: CN106462444A] The invention relates to an architecture and method for cloud provider selection and projection. According to the invention, an architecture and method are provided for selecting and projecting a data center. For example, one embodiment of an apparatus comprises: a broker component to manage data center information, the broker component to receive updates containing the data center information and to respond to queries to provide the data center information; a selection engine to perform data center selections and/or recommendations for a cloud user based on data center information read from the broker component, wherein the data center selections and/or recommendations are made based on data center requirements and/or preferences specified by the end user; and a projection component to interface with a selected data center and transmit data to configure the data center on behalf of the user upon selection of the data center from the selections and/or recommendations made by the selection engine.
