Abstract (en)

[origin: US2016338813A1] A tool for obtaining a dental occlusion in an edentulous patient has a main body including a rear curved plate to be positioned at an intraoral buccal of maxillary and mandibular ridges, a front curved plate to be positioned at extraoral upper and lower lips, a connecting part that connects respective intermediate parts of the rear and front curved plates along a vertical direction, and a through-hole that penetrates the rear and front curved plates and the connecting part, fixed in a state in which the connecting part is held between the upper and lower lips. The tool further includes an adjusting shaft inserted into the through-hole, and having one end projecting extraorally from a center between the upper and lower lips, and another end having a tongue support and intraorally holding a tip end of a tongue, to adjust the tongue support position and suppress tongue movement.
