Abstract (en)

[origin: EP3112569A1] The present invention relates to an operating device for operating a slidable wall part, such as a French door or a sliding door, comprising a transmission unit with a four-rod mechanism, which comprises: - a guide rail (52) which can be arranged on the slidable wall part in a third direction; - a first rod (72) which can be guided by the guide rail (52) and is slidable relative thereto in a longitudinal direction of the guide rail (52); - a second rod (62) which is arranged pivotally between a first rod (72) and a third rod (58); - wherein the third rod (58) is arranged substantially on or in line with the longitudinal direction of the guide rail for pivoting around a pivot shaft (56); and - wherein the slidable wall part forms a fourth rod of the four-rod mechanism. The invention further relates to an assembly of a slidable wall part with such an operating device, and to a method for application thereof.
