Abstract (en)
[origin: EP3112796A1] The invention relates to a swiveling mount provided for holding a reusable control unit of a missile launcher and a single-use launch tube complementary to the control unit both in the armed position, in which both components are coupled through connectors and ready for firing, and in the disarmed position, in which both components are separate and not coupled to one another for safely carrying same, by means of a first rotating support (11), a second pivoting support (21) attached to the first support, and a guided carriage assembled on the second support, the control unit being anchored to the second support and the launch tube (42) being attached to the guided carriage, allowing the relative movement of the launch tube with respect to the control unit by means of the movement of the guided carriage.
