Abstract (en)  
[origin: EP3113484A1] Provided are a mobile terminal and a photographing method therefor. The mobile terminal includes: an acquisition module, configured to continuously acquire image data; an adjustment module, configured to select image data from the continuously acquired image data and adjust an optical parameter of the selected image data; and a synthesis module, configured to synthesize the adjusted image data. By means of the present disclosure, the problem of incapability of a mobile terminal in achieving a photographing effect of an exposure mode with shutter priority, aperture priority or the like in the conventional art may be solved.
