Abstract (en)
[origin: WO2015127487A1] The invention relates to relaxation furniture (1) comprising a reclining device (2) which has a reclining surface (4) having a head region (5) and a foot region (7), wherein the head region (5) is formed opposite the foot region (7) along a longitudinal center axis (8), and comprising a cover device (3) with which the reclining surface (4) can be completely covered, wherein the cover device (3) has two swing doors (9, 10) which are hinged on the reclining device (2) so that the swing doors (9, 10) can be swiveled around an axis of rotation (11) independently of each other from a closed position covering the reclining surface (4) into an open position exposing the reclining surface (4), and wherein the two swing doors (9, 10) are hinged on the reclining device (2) such that they can be swiveled toward the head region (5) into the open position, and in the completely closed position, a lower edge (13, 14) of the swing doors (9, 10) is arranged at least at the height of the reclining surface (4).
