Abstract (en)  
[origin: WO2015132249A1] A housing for a plug-type connector comprises a first housing part and a second housing part which can be connected to the first housing part and has a fastening device for fastening an electric cable to the housing, wherein the second housing part is to be attached to the first housing part in an attachment direction in order to connect to the first housing part, and, in a connected position, is mechanically connected to the first housing part in such a way that the second housing part is held on the first housing part against the attachment direction. In addition, an elastically adjustable locking element (4) is provided, this locking element being arranged on one of the housing parts (2, 3) and assuming a locking position in the connected position of the housing parts (2, 3), the locking element (4) engaging with an engagement section (34) of the other of the housing parts (2, 3) in said locking position in such a way that the second housing part (3) is locked relative to the first housing part (2) against a rotation direction (S) which is directed around the attachment direction (A). In this way, a housing for a plug-type connector is provided, which housing allows secure and reliable connection of the housing parts to one another, in particular a connection which is secured against rotation, so that the housing parts are held against one another in a secure and reliable manner in the connected position.
