Abstract (en)

[origin: WO2015132209A1] The present invention relates to a method for modifying a binary video stream encoded according to a video coding algorithm comprising a prediction loop and a loop post-filtering integrated into the prediction loop. The method comprises the following steps performed by a device: searching for a syntax element relating to the loop post-filtering in the binary video stream, the syntax element being used by a decoding device to control a complexity of implementation of the loop post-filtering; and modifying (321, 323, 325) a value of the syntax element or deleting (321, 323, 325) the syntax element.
