Abstract (en)

A heating device for heating a seal having to be placed between rings of a bearing, comprising two longitudinal parts (10, 11) able to be moved relative to each other between a close position in which a longitudinal channel (27) is formed there between for being transverse longitudinally by said seal and an open position in which said seal can be introduced in and removed out of said channel ; and in which at least one of the said longitudinal part carries heating means (43-46) for heating the portion of the seal extending in said channel.
