Abstract (en)

[origin: CN104787413A] The invention relates to a device for supplying label sleeves to a container. The device includes an uncoiling means for providing a film hose from a reel; a supplying means for separating a label sleeve from the thin hose; and a tensioning device configured between the uncoiling means and the supplying means. The tensioning device enables the film hose to keep the pulling stress during a conveying process. A reverse brake device for the film hose is configured between the tensioning device and the supplying means. The invention also relates to a labeling apparatus comprising the above device.
