Abstract (en)

[origin: EP3115522A1] The invention relates to a base brick having its own technical characteristics on the upper face thereof (two cavities, an indentation, and two channels), on the lower face thereof (four feet, an indentation and two channels), and on the four side faces thereof (twelve separating pegs with twelve guiding wedges). The twelve separating pegs are used to obtain a precise gap in the four directions which allows equal distance between the cavities of the system for fitting the bricks together and the guiding wedges facilitate the rapid positioning of the base bricks. Said technical characteristics allow the base brick to provide perfect laying of foundations and positioning of the self-centring bricks and other bricks comprising systems for fitting the bricks together.
