Abstract (en)

[origin: EP3115523A1] The invention relates to a concrete panel, especially for composite floors, characterised in that it has a longitudinal reinforcement in the form of a steel truss arranged axially symmetrically, a fibre reinforcement and a bonding layer on the top surface of the concrete panel, wherein the height of the concrete panel is in the range of 100 to 500 mm and the width of the concrete panel is in the range of 20 to 90 cm. The invention relates also to a composite floor made of thin prefabricated concrete panels having a longitudinal reinforcement in the form of a steel truss arranged axially symmetrically, and a fibre reinforcement, wherein the height of the concrete panel is in the range of 100 to 500 mm and the width of the concrete panel is in the range of 20 to 90 cm.
