Abstract (en)

[origin: CN106338045A] The invention provides a light module (1) for motor vehicle illumination and/or signal indicating unit. The light module comprises at least one optical component (6,18) for deflecting light and a bearer (2), wherein the optical component for deflecting light is blocked at a moving station on the bearer through fixing devices (12,14). The fixing devices (12,14) are used for fixing a pressing board of the optical component for deflecting light on the bearer. At least one member in the fixing devices comprises adjusting components (24,30,33,46,48,49) which are used for adjusting the position of the optical component (6,18) for deflecting the light relative to the bearer so that the optical components for deflecting the light can be arranged at a plurality of separated preset moving positions.

Abstract (fr)

Un module lumineux (1), pour l'éclairage et/ou la signalisation d'un véhicule automobile, comporte au moins un moyen de déviation optique de rayons (6, 18) et un support (2) sur lequel le moyen de déviation est bloqué dans une position active par des dispositifs de fixation (12, 14) d'une platine (16) du moyen de déviation contre le support. Au moins un desdits dispositifs de fixation comporte des moyens d'ajustement (24, 30, 33, 46, 48, 49) de la position du moyen de déviation par rapport au support de sorte que le moyen de déviation peut prendre plusieurs positions actives définies distinctes.
