Abstract (en)

A coin hopper capable of effectively preventing fracture of a fixing member, suppressing increase in cost, and increasing fixation strength of a rotating disk with respect to a rotating shaft even if a rotating axis of the rotating disk and an axis of the fixing member are not coaxial is provided. In a state in which a fitting projecting part formed on an end surface of a rotating shaft and a fitting recessed part formed on a back surface side of a rotating disk are fitted with each other, a rotating disk and a rotating shaft are fixed by a fixing member. The acting force in a rotating direction which works between the rotating disk and the rotating shaft when the rotating disk is rotated is received by the fitting between the fitting projecting part and the fitting recessed part.
