Abstract (en)

[origin: WO2015136019A1] The invention relates to an arrangement for protecting a person (1), comprising a catching device (4) which is designed to secure the person (1) from falling while climbing a climbing path and comprising a connection element (3) which is designed to be connected to the person (1) to be secured. The catching device (4) and the connection element (3) are designed to electrically communicate with each other in a wireless manner such that the person (1) can climb the climbing path only after the person (1) has been connected to the catching device (4) and/or the connection element (3), and/or the person (1) can be released from the catching device (4) only after the person (1) has been connected to the connection element (3).
