Abstract (en)  
[origin: WO2015135891A1] The invention relates to dispenser (1) for discharging liquid to pasty materials, comprising a storage area (28) and a dispenser head part (2). A dispenser opening (22) is provided which is paired with the dispenser head part (2), and the dispenser head part (2) can be rotated about a rotational axis (y) from a first position, which prevents a dispenser actuation, into a second position, which produces a dispenser standby position. In the second position, an actuation part (3) can be moved along a displacement axis (x) in order to dispense the material through the dispenser opening (22). In order to produce an advantageously handheld dispenser, an opening part (21), which has the dispenser opening (22), is moved in a radial manner relative to the movement axis (x) when moving the dispenser head part (2) from the first position into the second position and back.
