Abstract (en)

[origin: WO2015135645A1] The present invention relates to a climbing device for a rotary tower crane, comprising a climbing frame for raising and/or lowering tower pieces, having a climbing frame that can be moved along the crane tower. According to the invention, a guide for longitudinally movably supporting the climbing frame with respect to the crane tower is provided. According to the invention, the guide has transverse supporting elements transverse to the direction of displacement of the climbing frame that are elastically resiliently mounted and/or that are elastically resilient.
