Abstract (en)

[origin: WO2015138436A1] A method and system are provided for locally storing data obtained from a plurality of sources, the local communication device being in communication with a local server that is associated with a local network, the local server also associated with an external network, and at least one client terminal device that communicates with the local server over an internal network, the local server synchronizing with a set of at least one or more remote servers over the external network.
