Abstract (en)

[origin: EP3117737A1] The present invention disclosed herein relates to a rotary open/close-type tube container. The container is configured in such a manner that when rotating an over cap in the open direction or the close direction, a rotary cap rotates together up to a certain section and a contents movement hole formed on a seal cap is opened/closed by raising/lowering the seal cap, whereby the contents movement hole is automatically opened/closed by a simple operation of opening/closing the over cap, thus providing a user convenience.
