Abstract (en)

A machine for making cigarette packets (100) of the "shoulder box" type, comprising a making-up unit (2) configured to make up the base (101) and the lid (102) onto the collar (104) along a making-up path (3). First feeding means (4) are configured to move a first continuous band (5), which is suitable for making the collar (104) of each packet (100), along a first feed path (P1). Second feeding means (6) are configured to move a second continuous band (7), which is suitable for making the base (101) of each packet (100), along a second feed path (P2). Third feeding means (8) are configured to move a third continuous band (9), which is suitable for making the lid (102) of each packet (100), along a third feed path (P3). The first, second and third feed paths (P1, P2, P3) meet the making-up unit (2) along the making-up path (3). [Figure 3]
