Abstract (en)
A container assembly (1) includes a first container (2) having a first opening (2b), and a second container (6) having a lid wall (7). A closure (14) hingedly interconnects the first and second containers (2, 6) for swinging movement between a stacked position in which the lid wall (7) overlies and closes the first opening (2b), and an unstacked position in which the lid wall (7) is removed from the first opening (2b). The closure (14) maintains the containers interconnected throughout the movement between the stacked and unstacked positions.
