Abstract (en)  
[origin: WO2015142817A1] Embodiments of the invention provide a method and apparatus for a wireless exercise monitoring system for interactively monitoring an aspect of exercise, sports, or fitness utilizing a wearable device, such as a watch, eyewear, or smart apparel. The device is equipped with, or connected to, a digital camera. Sensors integrated with, or wirelessly connected to, the wearable internet device record physiological data during exercise and data measuring the amount of exercise performed. The data and visual images from the camera are transmitted to one or more internet servers, and may be shared with other mobile internet devices.
