Abstract (en)
[origin: WO2015132478A1] The invention relates to a propulsion device (20) comprising a body designed to accommodate a passenger and collaborating with a thrust unit the main nozzle or nozzles (22) of which are advantageously directed from the bow toward the stern of said device. Said device (20) is supplied with pressurized fluid from a remote compression station. The "all-in-one" design of such a device offers immense freedom and speed of travel in the open and/or under the surface of a fluid. The invention also relates to a propulsion system in which the remote station may be a nautical craft with a motor (30) designed to collaborate with a propulsion device.
