Abstract (en)

[origin: WO2015140204A1] The invention relates to a drive device for driving a tool slide in a folding system, the drive device comprising a slide plate, which is indirectly or directly connected to the tool slide, and a drive shaft, which can rotate about an axis of rotation. A rotational movement of the drive shaft can be converted by means of a cam to a linear movement of the slide plate, said movement proceeding along a direction of advancement.
