Abstract (en)  
[origin: WO2015177178A1] The invention relates to a method for guiding a passenger to a passenger seat arranged in a vehicle, and to a passenger guidance system for carrying out this method. In order to guide a passenger quickly and reliably to a passenger seat which corresponds to his needs and is arranged in a vehicle, and to improve the flow of passengers, it is proposed to determine (1; 7; 13) occupation states of passenger seats (32) of the vehicle (30) and to guide (5; 11; 25) the passenger to an unoccupied passenger seat. In order to carry out the method, a passenger guidance system is proposed which has at least one device (34, 35, 33, 38; 80) for determining the occupation state of passenger seats (32) arranged in a vehicle (30), at least one evaluation device (40; 76) which is configured to determine a destination to which a passenger is to be guided, and a transmission device (42, 44; 60) by means of which data which are suitable for indicating a path to the destination can be transmitted to at least one display device (46; 54).
